

To be most effective, Waterford's technology-driven curriculum needs to tie into your core classroom instruction. The new Waterford Classroom Kit makes this easy to do. It puts all the resources you need right at your fingertips.

What's in the Box

The Waterford program is divided into three levels of instruction. Each level corresponds to roughly one year of content for the student experience. The Classroom Kit contains the resources for all three levels in order to meet all of your students' learning needs.

Lessons and Resources

The Lessons and Resources guides are filled with professionally developed lesson plans. These plans include presentations of concepts, quick tools and tips for teaching, and connections to computer activities.

Masters and Worksheets

The Masters and Worksheets guides contain black-line masters that coordinate Waterford's digital curriculum with in class and take-home learning.

Media

The CDs and DVDs contain songs and digital books that are thematically organized into several volumes. This media is an effective teaching tool that can be utilized in the classroom and the home.

Overview and Quick Reference Guides

The Overview outlines the program's scope and sequence and shows sample reports, activities, and research. The Quick Reference flip chart contains step-by-step instructions for setting up Waterford.
